MEMORANDUM FOR THE DIRECTOR, NPIC
FOR THE DIRECTOR, DIA (SAO)

SUBJECT: Announcement of the 112-A Camera System

The 112-A Camera System has been developed to provide an increased collection capability from an aircraft. This system consists of a KH-3 (C'') camera and a tracker camera installed in a Lockheed U-2 aircraft.

Because the system will be flown over Cuba and the photography from such operations is classified SECRET, it was necessary to classify the inclosed camera data SECRET. The data has been carefully prepared to exclude information which might compromise factors relating to the covert procurement or prior usage of the camera.

It is most important that this data be released on a strict need-to-know basis, as determined by your office. All information on this collection system, other than that contained herein or that which subsequently may be approved by this office for release from operational sources, will remain in the separate CORONA or IDEALIST systems.
